San Diego Canyons Stewardship Program

Program Date(s): Dec. 2010 - July 2011

XYZ school name or neighborhood is privileged to have

Canyon/Creek Name in their/our neighborhood. In

collaboration with San Diego Canyonlands, naturalists

will lead children on explorations of the CanyonName

habitat in search of birds, plants, and animals. Children

may also assist with habitat restoration through

plantings, weed removal, or creek clean ups. Youth 7th grade or older may use long

handled loppers, shovels, or hoes to help with this project. All kids may use spade

shovels and trash grabbers. In addition to this hands-on learning, your child will:

- Observe the birds and plants that make their home in Chollas Creek.
- Learn about the native plants that provide food and shelter for creek wildlife.
- Detect some of the human impacts on the creek.

Our naturalist guides are outdoor education specialists with many years of experience providing fun, safe, and active experiences in nature for your child. We look forward to guiding your child on an adventure of fun, discovery, and wonder in CanyonName.
